Marine National Parks and Marine Sanctuaries Boundary Coordinates

WGS84 – Degrees, Minutes & Seconds

Only use the coordinates if your GPS Receiver is in WGS84 Datum and the coordinate system is Latitude/Longitude – Degrees, Minutes & Seconds (i.e. DDD°MM'SS").

If you are plotting these points on a Nautical Chart, remember to check that the datum of the chart is the World Geodetic System. This will be found near the Chart Title. If the chart is *not* WGS84, you will need to refer to a different list of coordinates.

Marine National Parks and Marine Sanctuaries Boundary Coordinates

WGS84 – Degrees, Minutes & Decimal Minutes

Only use the coordinates if your GPS Receiver is in **WGS84** Datum and the coordinate system is **Latitude/Longitude – Degrees, Minutes & Decimal Minutes** (ie. DDD°MM.MM).

If you are plotting these points on a Nautical Chart, remember to check that the datum of the chart is the World Geodetic System. This will be found near the Chart Title. If the chart is *not* WGS84, you will need to refer to a different list of coordinates.

Note: Information provided in these tables is to provide guidance for boaters on boundaries for Victoria's Marine National Parks and Marine Sanctuaries. The information contained within these tables has been derived from Certified Plans and other sources and is accurate for most applications.

It should be noted that some points are difficult to describe using coordinates alone and if 100% accuracy is required navigators should refer to the Certified Plans. Certified Plans for the Marine National Park system are available from the DSE website (www.dse.vic.gov.au) which describe the legal boundaries of the reserves.

Marine National Parks and Marine Sanctuaries Boundary Coordinates

WGS84 – Eastings / Northings

Only use the coordinates if your GPS Receiver is in **WGS84** Datum and the coordinate system is Easting/Northing (ie. 1234567 metres) using Map Grid of Australia(MGA94).

If you are plotting these points on a Nautical Chart, remember to check that the datum of the chart is the World Geodetic System. This will be found near the Chart Title. If the chart is *not* WGS84, you will need to refer to a different list of coordinates.

Note: Information provided in these tables is to provide guidance for boaters on boundaries for Victoria's Marine National Parks and Marine Sanctuaries. The information contained within these tables has been derived from Certified Plans and other sources and is accurate for most applications.

It should be noted that some points are difficult to describe using coordinates alone and if 100% accuracy is required navigators should refer to the Certified Plans. Certified Plans for the Marine National Park system are available from the DSE website (www.dse.vic.gov.au) which describe the legal boundaries of the reserves.

Marine National Parks and Marine Sanctuaries Boundary Coordinates

GDA94 – Degrees, Minutes and Seconds

Only use the coordinates if your GPS Receiver is in **GDA94** Datum and the coordinate system is Latitude/Longitude – Degrees, Minutes & Seconds (ie. DDD°MM'SS'').

If you are plotting these points on a Nautical Chart, remember to check that the datum of the chart is the Geodetic Datum of Australia. This will be found near the Chart Title. If the chart is *not* GDA94, you will need to refer to a different list of coordinates.

Note: Information provided in these tables is to provide guidance for boaters on boundaries for Victoria's Marine National Parks and Marine Sanctuaries. The information contained within these tables has been derived from Certified Plans and other sources and is accurate for most applications.

It should be noted that some points are difficult to describe using coordinates alone and if 100% accuracy is required navigators should refer to the Certified Plans. Certified Plans for the Marine National Park system are available from the DSE website (www.dse.vic.gov.au) which describe the legal boundaries of the reserves.

Marine National Parks and Marine Sanctuaries Boundary Coordinates

GDA94 – Degrees, Minutes and Decimal Minutes

Only use the coordinates if your GPS Receiver is in GDA94 Datum and the coordinate system is Latitude/Longitude – Degrees, Minutes & Decimal Minutes (ie. DD°MM.MM).

If you are plotting these points on a Nautical Chart, remember to check that the datum of the chart is the Geodetic Datum of Australia. This will be found near the Chart Title. If the chart is *not* GDA94, you will need to refer to a different list of coordinates.

Note: Information provided in these tables is to provide guidance for boaters on boundaries for Victoria's Marine National Parks and Marine Sanctuaries. The information contained within these tables has been derived from Certified Plans and other sources and is accurate for most applications.

It should be noted that some points are difficult to describe using coordinates alone and if 100% accuracy is required navigators should refer to the Certified Plans. Certified Plans for the Marine National Park system are available from the DSE website (www.dse.vic.gov.au) which describe the legal boundaries of the reserves.

Marine National Parks and Marine Sanctuaries Boundary Coordinates

GDA94 – Eastings / Northings

Only use the coordinates if your GPS Receiver is in **GDA94** Datum and the coordinate system is Easting/Northing (ie. 1234567 metres) using Map Grid of Australia(MGA94).

If you are plotting these points on a Nautical Chart, remember to check that the datum of the chart is the Geodetic Datum of Australia. This will be found near the Chart Title. If the chart is *not* GDA94, you will need to refer to a different list of coordinates.

Note: Information provided in these tables is to provide guidance for boaters on boundaries for Victoria's Marine National Parks and Marine Sanctuaries. The information contained within these tables has been derived from Certified Plans and other sources and is accurate for most applications.

It should be noted that some points are difficult to describe using coordinates alone and if 100% accuracy is required navigators should refer to the Certified Plans. Certified Plans for the Marine National Park system are available from the DSE website (www.dse.vic.gov.au) which describe the legal boundaries of the reserves.

Marine National Parks and Marine Sanctuaries Boundary Coordinates

AGD66 – Degrees, Minutes and Seconds

Only use the coordinates if your GPS Receiver is in **AGD66** Datum and the coordinate system is Latitude/Longitude – Degrees, Minutes & Seconds (ie. DDD°MM'SS").

If you are plotting these points on a Nautical Chart, remember to check that the datum of the chart is the Australian Geodetic Datum. This will be found near the Chart Title. If the chart is *not* AGD66, you will need to refer to a different list of coordinates.

Note: Information provided in these tables is to provide guidance for boaters on boundaries for Victoria's Marine National Parks and Marine Sanctuaries. The information contained within these tables has been derived from Certified Plans and other sources and is accurate for most applications.

It should be noted that some points are difficult to describe using coordinates alone and if 100% accuracy is required navigators should refer to the Certified Plans. Certified Plans for the Marine National Park system are available from the DSE website (www.dse.vic.gov.au) which describe the legal boundaries of the reserves.

Marine National Parks and Marine Sanctuaries Boundary Coordinates

AGD66 – Degrees, Minutes and Decimal Minutes

Only use the coordinates if your GPS Receiver is in **AGD66** Datum and the coordinate system is Latitude/Longitude – Degrees, Minutes & Decimal Minutes (ie. DDD°MM.MM).

If you are plotting these points on a Nautical Chart, remember to check that the datum of the chart is the Australian Geodetic Datum. This will be found near the Chart Title. If the chart is *not* AGD66, you will need to refer to a different list of coordinates.

Note: Information provided in these tables is to provide guidance for boaters on boundaries for Victoria's Marine National Parks and Marine Sanctuaries. The information contained within these tables has been derived from Certified Plans and other sources and is accurate for most applications.

It should be noted that some points are difficult to describe using coordinates alone and if 100% accuracy is required navigators should refer to the Certified Plans. Certified Plans for the Marine National Park system are available from the DSE website (www.dse.vic.gov.au) which describe the legal boundaries of the reserves.
