Dandenong Ranges Botanic Garden – Spring Flowering Guide

Spring is the peak flowering season for the Dandenong Ranges Botanic Garden. Over the next 12 weeks, the garden will burst with a variety of colour.

Predicting flower blooms can be difficult, as they may not bloom at exactly the same time from year to year. The previous 12-months' weather patterns, along with current weather conditions (heat, cold, rain & wind) affect the timing and duration of any bloom.

Use the following information as a guide, but know there is always something new to see and discover on your next garden visit:

Early September:

Early rhododendrons and camellias are in flower, along with hellebores, proteas, daffodils, and early magnolias

Late September:

The cherries usually reach their peak from mid-September to early October. Once open, flowers last 4-10 days depending on prevailing weather conditions.

October:

Rhododendrons, camellias, and azaleas continue to flower, along with proteas and leucadendrons.

November:

Late flowering rhododendrons including Vireya rhododendrons, along with Salvias and other summer perennials are on display.

Seasonal changes ensure the garden is a year-round delight!

**During the spring flowering period, we expect large crowds, especially on weekends. Consider if you can visit mid-week or early in the morning when the garden may be quieter.*

There is limited parking available on site. Additional parking is available next door at the Olinda Recreation Reserve, the former Olinda Golf Course, and close by at the Olinda Swimming Pool and Community House.

If the car parks are full, you should consider visiting a different site.

If you want to avoid the crowds, visit the nearby Pirianda Garden, Alfred Nicholas Memorial Garden or George Tindale Memorial Garden.
